AITech VoIP Proposal

A Better Voice Alternative for Your Business

November 28, 2007

Dear Customer,

Thank you for taking the time to consider AITech's VoIP business services. A comprehensive proposal is outlined below. Recommendations made are based upon the extensive site survey done at your office. AITech recommends equipment and connectivity options that we feel will maximize your investment in VoIP.

AITech's hosted VoIP service does not require the use of expensive, proprietary PBX switching equipment. All features listed on our proposal are hosted on our fully redundant network. Additionally, we are proposing the installation of our DS-1 product. This additional VoIP grade bandwidth will provide sufficient capacity for your voice and data needs.

AITech's PowerCall Plus VoIP service includes many cost saving and productivity enhancing features. A brief list is included below.

- Integration with MS Outlook and Internet Explorer
- Unified Messaging for Voicemail & Emails
- Personal Web Portal
- Remote Office
- Selective Call Acceptance and Forwarding
